To: itp.nachman@noaa.gov, president@whitehouse.gov, americanvoices@mail.house.gov, letters@latimes.com, speakerboehner@mail.house.gov, info@taxpayer.net, media@cagw.org

there is no need for any marine life to be killed if this agency puts into effect a mandatory penalty of \$1 million for any such animals killed by these permits. that needs to be done and put on the law books post haste. noaa is so negligent in protecting marine life. this appears to be a very expensive project and another example of nsf out of control spending. this is a waste of taxpayer dollars since volunteers can be invited to do this without spending this huge sum. our state uses volunteers all of the time and see no reason why this expensive project is fully funded by gouged national taxpayers paying out of control high taxes.

this project should be defunded to zero and a new approach using volunteers for these infrequent trips to the beach. the taxpayers need help from being gouged by fat cat bureaucrats who continually give out the largesse because it isn't their money. and to use the word "abundance" when you talk about 30,000 seals is so stupid when you consider the humane population of California at over 36 million people. what is abundant in California is people, not seals. the seals are fast losing out. this comment is for the public record. please acknowledge receipt. jean public

Takes of Marine Mammals Incidental to Specified Activities;  
 Taking Marine Mammals Incidental to Rocky Intertidal Monitoring Surveys  
 Along the Oregon and California Coasts

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and  
 Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request  
 for comments.

-----  
 SUMMARY: NMFS has received an application from the Partnership for  
 Interdisciplinary Study of Coastal Oceans (PISCO) at the University of  
 California (UC) Santa Cruz for an Incidental Harassment Authorization  
 (IHA) to take marine mammals, by harassment, incidental to rocky  
 intertidal monitoring surveys. Pursuant to the Marine Mammal Protection  
 Act (MMPA), NMFS is requesting comments on its proposal to issue an IHA  
 to PISCO to incidentally take, by Level B harassment only, marine  
 mammals during the specified activity.

# MARINE MAMMAL COMMISSION

6 November 2013

Mr. P. Michael Payne, Chief  
Permits and Conservation Division  
Office of Protected Resources  
National Marine Fisheries Service  
1315 East-West Highway  
Silver Spring, MD 20910-3225

Dear Mr. Payne:

The Marine Mammal Commission (the MMC), in consultation with its Committee of Scientific Advisors on Marine Mammals, has reviewed the application submitted by the Partnership for the Interdisciplinary Study of Coastal Oceans (PISCO) at the University of California Santa Cruz under section 101(a)(5)(D) of the Marine Mammal Protection Act (the MMPA). PISCO is proposing to take small numbers of marine mammals by harassment incidental to conducting rocky intertidal monitoring activities along the California and Oregon coasts. The MMC also has reviewed the National Marine Fisheries Service's (NMFS) 30 October 2013 notice (78 Fed. Reg. 64918) announcing receipt of the application and proposing to issue the authorization, subject to certain conditions. The MMC commented on a similar proposed incidental harassment authorization in 2012.

## RECOMMENDATION

The Marine Mammal Commission recommends that the National Marine Fisheries Service issue the incidental harassment authorization, subject to the inclusion of the proposed mitigation and monitoring measures.

## RATIONALE

PISCO proposes to conduct rocky intertidal surveys at numerous sites along the California and Oregon coasts in all months except January, August, and September. The proposed activities are part of a long-term monitoring program that includes (1) surveying permanent photoplot quadrats, permanent transects, and mobile quadrats for algae and invertebrates, (2) assessing and measuring invertebrates, (3) measuring tidal height topographically, (4) characterizing baseline intertidal data associated with new marine protected areas, (5) monitoring invertebrate larval recruitment, and (6) monitoring oceanic pH using intertidal organisms. Research-related sound and the increased presence of humans would be the main sources of marine mammal disturbance. The activities would continue indefinitely, however, the authorization would be valid for a one-year period only.

NMFS preliminarily has determined that, at most, the proposed activities temporarily would modify the behavior of small numbers of California sea lions, harbor seals, and northern elephant seals. It also anticipates that any impact on the affected species and stocks would be negligible. NMFS does not anticipate any take of marine mammals by death or serious injury and believes that

Mr. P. Michael Payne

Page 2

the potential for disturbance will be at the least practicable level because of the proposed mitigation and monitoring measures. Those measures include—

- (1) rescheduling the survey if Steller sea lions are present at the survey site;
- (2) restricting intentional flushing of pups if they are present at the survey site;
- (3) moving slowly and staying close to the ground to prevent or minimize stampeding of pinnipeds;
- (4) avoiding loud noises (i.e., using hushed voices);
- (5) avoiding pinnipeds along access paths to sites by locating and taking a different access path and vacating the area as soon as the survey is completed;
- (6) monitoring the offshore area for predators (i.e., killer whales and white sharks) and avoiding flushing pinnipeds when predators are observed in nearshore waters;
- (7) using binoculars to detect pinnipeds before approaching to avoid being seen by them;
- (8) flushing pinnipeds only if they are located in the survey plots and there are no other means to accomplish the survey—however, flushing must be done slowly and quietly so as not to cause a stampede;
- (9) using qualified observers to monitor and evaluate incidental takes;
- (10) reporting tagged pinniped carcasses to the appropriate personnel;
- (11) reporting rare or unusual species of marine mammals to NMFS;
- (12) reporting injured and dead marine mammals to the NMFS and local stranding network using NMFS's phased approach and suspending activities, if appropriate; and
- (13) submitting a final monitoring report.

The MMC concurs with NMFS's preliminary finding and recommends that NMFS issue the incidental harassment authorization, subject to the inclusion of the proposed mitigation and monitoring measures.

Thank you for the opportunity to provide comments on PISCO's application. Please contact me if you have questions regarding the MMC's recommendation.

Sincerely,

Rebecca J. Lent, Ph.D.  
Executive Director
