Dear Ms. Harrison:

Marine Corps Air Station (MCAS) Cherry Point is providing the enclosed annual report in fulfillment of requirements under the provisions of our Incidental Harassment Authorization (IHA) to harass marine mammals incidental to military training exercises at the U.S. Marine Corps Cherry Point Range Complex, North Carolina. Enclosures (2), (3), and (4) of the report represent the date and times of training activities and marine mammal sightings.

Range Sweeps for safety zone monitoring have been executed with a contracted, fixed-wing aircraft utilizing the approximate flight path as described in the IHA. As required, the flights provided pre- and post-exercise monitoring. Observational data associated with these flights is maintained in a geo-rectified database to aide future mission planning and natural resources management decision processes.

We appreciate your continued cooperation specific to the above information. If you have questions or require additional information, please contact Ms. Jessica Guilianelli, Natural Resources Manager, at (252) 466-4826 or jessica.guilianelli@usmc.mil.

Sincerely,

ANTHONY A. FERENCE
Deputy Facilities Director
By direction of the
Commanding Officer

1. REPORT OF ACTIVITIES

1.1 INTRODUCTION

The United States Marine Corps (USMC) has prepared this Annual Marine Mammal Compliance Report in accordance with the 1-Year Incidental Harassment Authorization (IHA) issued by the National Marine Fisheries Service (NMFS) on 17 May 2021. This report summarizes the type and amount of training activities that took place at two in-water bombing targets (BTs) located in Pamlico Sound, North Carolina (NC), known as the Brant Island Target (BT-9) and the Rattan Bay bombing targets of the Piney Island Bombing Range (BT-11) (Figure 1). These bombing targets are under the control and management of Marine Corps Air Station (MCAS) Cherry Point.

The United States Marine Corps (USMC) supported and conducted operations at the MCAS Cherry Point Range Complex (Figure 1) during the reporting period. The focus of this document includes only those training missions occurring on the water ranges or with impact areas over the water due to their potential to affect marine mammals. These missions include:

- **Munitions Firing** – Units conduct air-to-ground, surface-to-surface, and air-to-surface munitions delivery at targets that are located on land or in water. Air-to-ground firing does not impact the water; therefore, it is not analyzed or discussed further in this document.
- **Small Boat Maneuvers** – Units operate small watercraft that use inboard or outboard engines with either propeller or water jet propulsion.

In-water bombing targets at Brant Island (BT-9) and Rattan Bay (part of BT-11) are used to train military personnel to deliver ordnance on target. Ordnance is primarily delivered from fixed-wing and rotary wing aircraft, but is also occasionally delivered from small, military watercraft. Table 1-1 provides a general description of the training activities and munitions used on BT-9 and BT-11.

Table 1-1. Description of Bombing Targets

Range Asset	Training Operation	Type of Munitions Used
Brant Island Target (BT-9)	Water-based target range for air-to-surface and surface-to-surface warfare training, including bombing, strafing, special (laser systems) weapons, and surface fires, using non-explosive and explosive ordnance; also provides a mining exercise area.	<ul style="list-style-type: none"> • Small arms • .50 caliber • Large arms (live and inert) • Bombs (live and inert) • Pyrotechnics
Piney Island Bombing Range (BT-11)	Complex of land- and water-based targets designed to provide training in the delivery of conventional (non-explosive) and special (laser systems) weapons; secondary use for surface-to-surface training by small military watercraft.	<ul style="list-style-type: none"> • Small arms • .50 caliber • Large arms (inert) • Bombs (inert) • Pyrotechnics

The following subsections provide detailed information about the three MCAS Cherry Point mission categories included in this report.

1.2 MUNITIONS FIRING

Munitions firing training conducted on the water ranges includes surface-to-surface firing (from ship or boat to surface targets) and air-to-surface firing (from aircraft to surface water targets). This activity occurs year round with no seasonal restrictions. There are many types of ordnance used at BT-9 and BT-11, including practice bombs, rockets, flares, chaff, gun ammunition, and grenades (Table 1-2). Note that deployment of live ordnance is only permitted at BT-9; all munitions fired at BT-11 are inert.

MCAS Cherry Point's standard operating procedures set the maximum limit at 100 pounds (lbs) trinitrotoluene (TNT) equivalent for explosive ordnance at BT-9. Net explosive weights (NEW) currently authorized for use at BT-9 range from 0.1019 to 100 lbs. Practice bombs used at both targets are inert, but they do contain a small amount of explosive marking charge in a signal cartridge that allows the target hit to be detected by range scorekeepers and the pilot. Explosives in the signal cartridge are less than 1 lb TNT equivalent. Note that all ordnance fired on BT-11 is inert with the exception of a signal charge in practice bombs.

1.2.1 Surface-to-Surface

Gunnery exercise is the only category of surface-to-surface activity currently conducted at BT-9 and BT-11.

- **Gunnery Exercise:** A small boat, typically operated by Special Boat Team personnel, uses a machine gun to attack and disable, or destroy, a surface target that simulates another ship, boat, swimmer, floating mine or near-shore land targets. Boats conducting surface-to-surface firing activities will typically use 7.62 millimeter (mm) or .50 caliber (cal) machine guns; 40 mm grenade machine guns; or G911 concussion hand grenades. This exercise is usually a live-fire exercise, but blanks may be used so that the boat crews can practice their ship handling skills. BT-9 is the most common target used for gunnery exercises. A target is not used for the gunnery exercises employing the G911 Concussion grenade, as the goal of this specific training is to learn how to throw the grenade into the water

Notes: 1. Variants of the listed munitions and newly developed munitions that fall into these categories may be approved for use at the Range Complex as they become available.

2. Two types on missiles, Hellfire and TOW, were previously approved for use at BT-9 per Air Station Order P3570.2R; however, use of these missiles at MCAS Cherry Point has been cancelled since Fiscal Year (FY) 2005 due to operational limitations imposed by an insufficient weapon danger zone safety footprint at the water range.

1.2.2 Air-to-Surface

There are four categories of air-to-surface activities conducted at the MCAS Cherry Point bombing targets—mine laying, bombing, gunnery, and rocket exercises.

- **Mine Laying:** These activities involve a fixed-wing aircraft deploying inert mine shapes in an offensive or defensive pattern. Mine laying operations are conducted in the waters around BT-9.
- **Bombing Exercise:** During these exercises, fixed-wing aircraft deliver bombs against surface maritime targets with the goal of destroying or disabling enemy ships or boats. These exercises occur during day and night. Air-to-surface bombing exercises employ either unguided or precision-guided munitions. Unguided munitions include MK-76 and BDU-45 inert training bombs, as well as the MK-80 series of inert bombs (no cluster munitions are authorized). Precision-guided munitions consist of laser-guided bombs (inert) and laser-guided training rounds (inert).
- **Gunnery Exercise:** Rotary-wing gunnery exercises involve either CH-53, UH-1, CH-46, MV-22, or H-60 rotary-wing aircraft with mounted 7.62 mm or .50 cal machine guns. Each gunner expends approximately 800 rounds of 7.62 mm or 200 rounds of .50 cal ammunition per exercise. Fixed-wing gunnery exercises involve two aircraft that begin descent to the target from an altitude of approximately 914 meters (m) (3,000 feet [ft]) while still several miles away. Within a distance of 1,219 m (4,000 ft) from the target, each aircraft fires a burst of approximately 30 rounds before descending to a minimum altitude of 305 m (1,000 ft) and then breaks off and repositions for another strafing run. This continues until each aircraft expends its exercise ordnance allowance of approximately 250 rounds. Typically fixed-wing gunnery exercises involve F/A-18 with Vulcan M61A1/A2, 20 mm cannon, and AV-8 with GAU-12, 25 mm cannon.
- **Rocket Exercise:** Fixed- and rotary-wing aircraft crews launch rockets at surface maritime targets during rocket exercises with the goal of destroying or disabling enemy ships or boats. Rocket exercises may occur day or night. These operations employ 2.75-inch (in) and 5-in rockets.

Table 1-3 provides the total number of sorties by mission type for each bombing target. Attachment 1 of this report contains a listing all individual training events by date for each respective target.

1.2.3 Quantity and Accuracy of Ordnance Used

The total amount of ordnance expended at BT-9 and BT-11 under the term of this IHA through 17 May 2022 are 355,852 and 1,340,274 respectively (Table 1-4 and Table 1-5). The amounts of ordnance expended at the bombing targets account for all use of the targets. During the period of this LOA report, minimum numbers of high explosive (live) munitions were fired at BT-9. High explosive (live) munitions are never permitted at BT-11.

2.0 MARINE MAMMAL OBSERVATIONS

Beginning on 17 May 2015, and as agreed to by NMFS, MCAS Cherry Point began contracting a small fixed-wing aircraft to conduct pre- and post-exercises range sweeps. Procedures for executing our range sweeps are included within our Incidental Harassment Authorization and codified in 33 CFR 334.420 specific to defined restricted areas as reflected on Figure (1).

The following documents marine mammal observations made during the reporting period. On six occasions, dolphins were observed in the vicinity of BT-11, Piney Island, by the Range Sweep contractor (Figure 2). No marine mammals were observed by pilots or operators during air-to-surface (rotary-wing or fixed-wing aircraft) or surface-to-surface (small to large boats) training activities. When dolphins were observed by the range sweep, operations were not commenced until the dolphin(s) had left the area.

3.0 SENSOR BASED MONITORING

MCAS Cherry Point has continued to make progress on developing sensor based approaches to monitoring bottlenose dolphins at the bombing targets. The communication link from BT-9 to BT-11 has been repaired. Devices have been deployed and are currently undergoing testing to ensure the accuracy of recorded detections.

Detections are being recorded and encroachments into the target area by dolphins result in an alert into the Range Operations Control Center located on BT-11. When such a detection occurs, the specific target is closed until no additional detections occur and no dolphins are seen on the range cameras. We continue to pursue device development and refinement through analysis of the data collected, while satisfying related high level security requirements. We anticipate that the data collected will be provided with the next annual monitoring report.

4.0 EFFECTIVENESS OF MONITORING

The Marine Mammal and Protected Species Monitoring Plan for the USMC Cherry Point Range Complex was developed based upon an existing Biological Opinion with the NMFS for the protection of threatened and endangered species and as coordinated with the NMFS during the Incidental Harassment Authorization application process. The procedures in place to detect marine mammals on the ranges prior to and during surface-to-surface and air-to-surface training are effective and meet the mitigation and monitoring requirements set forth by the IHA.

5.0 MARINE MAMMAL STRANDING NETWORK COORDINATION

During the reporting period, one marine mammal stranding were reporting. On June 2, 2021, a deceased dolphin was observed in the Pamlico Sound during the range sweep flight. The animal was not located within a target area. Photographs and location of the individual were reported to the stranding network. The carcass was not able to be located.
