

Atlantic Swordfish Landings Update: Commercial and Recreational 2008 Fishing Year

The table below provides preliminary landings estimates and remaining quotas as of October 31, 2008, in pounds (lb) and metric tons (mt) dressed weight (dw) for the Atlantic swordfish fisheries for the 2008 fishing year. Please note that these estimates are subject to late reporting and do not include discards. The 2008 annual directed landings quota seen below has not been adjusted for 2007 underharvests; NMFS published a proposed rule to adjust the 2008 base quota for these underharvests on November 18, 2008 (73 FR 68398). The comment period for this proposed rule ends on December 18, 2008.

Recreational landing estimates are reported by anglers in the HMS Non-Tournament Recreational Swordfish and Billfish Landings Database and the Recreational Billfish Survey. Reported lengths are converted to pounds dressed weight using standard International Commission for the Conservation of Atlantic Tunas' (ICCAT) formulas (formulas can be found at <http://www.iccat.int/main.htm>). As specified in § 635.27(c)(i)(B), all recreational landings are counted against the incidental quota.
