

Atlantic Swordfish Landings Update: Commercial and Recreational 2009 Fishing Year

The table below provides preliminary landings estimates and remaining quotas as of November 30, 2009, in pounds (lb) and metric tons (mt) dressed weight (dw) for the Atlantic swordfish fisheries for the 2009 fishing year. Please note that these estimates are subject to late reporting and do not include discards. On December 16, 2009, NMFS published a final rule (74 FR 66585) to adjust the 2009 base quota for these underharvests. The 2009 annual directed landings quota seen below has been adjusted for 2008 underharvests.

Recreational landing estimates are reported by anglers in the HMS Non-Tournament Recreational Swordfish and Billfish Landings Database and the Recreational Billfish Survey. Reported lengths are converted to pounds dressed weight using standard International Commission for the Conservation of Atlantic Tunas' (ICCAT) formulas (formulas can be found at <http://www.iccat.int/main.htm>). As specified in § 635.27(c)(i)(B), all recreational landings are counted against the incidental quota.
