

## BIBLIOGRAPHY

### National Artificial Reef Workshop: June 9-10, 2016

*The following list of scientific publications and informational resources is the result of a rapid, and thus not fully comprehensive, literature review on artificial reefs with a focus on the years 2007 to 2016. This bibliography is intended as a resource for workshop participants.*

The literature review, conducted by the workshop facilitation team, was designed to inform workshop planning efforts by building foundational knowledge on the current state of the science, emerging issues surrounding artificial reefs, and recent scientific and technological advancements. The facilitation team compiled and reviewed legal frameworks and policy documents; strategic plans and artificial reef program management plans; recent scientific research; and standards for artificial reef development, among other documents.

Due to the vast amount of artificial reef literature in existence, the research team focused its review on science articles published since 2007, the year the National Artificial Reef Plan was last updated. Moreover, the review effort looked solely at artificial reef program development and research in U.S. waters in order to align findings with the geographic scope and focus of the workshop. This approach—including review of approximately 90 scientific publications and numerous state and local program management plans—enabled insight on relevant scientific research across a range of topics, technological advances, and program implementation in multiple states and localities across the country.
