Please provide the following information, and submit to the NOAA DM Plan Repository.

Reference to Master DM Plan (if applicable)

As stated in Section IV, Requirement 1.3, DM Plans may be hierarchical. If this DM Plan inherits provisions from a higher-level DM Plan already submitted to the Repository, then this more-specific Plan only needs to provide information that differs from what was provided in the Master DM Plan.

URL of higher-level DM Plan (if any) as submitted to DM Plan Repository:

1. General Description of Data to be Managed

1.1. Name of the Data, data collection Project, or data-producing Program:
Summer and fall bottom dissolved oxygen maps of the Western and North-central Gulf of Mexico, 1982-1998

1.2. Summary description of the data:
Bottom dissolved oxygen (DO) measurements acquired during the summer and fall Southeast Monitoring and Assessment Program’s (SEAMAP) groundfish surveys of the Western and North-central Gulf of Mexico during 1982-1998 were gridded and contoured using the Environmental System Research Institute’s (ESRI) ArcView v3.2 software and Spatial Analyst module and converted to grid files and images. The summer maps (June-July) cover the years from 1982 to 1998 and the fall data (October-November) from 1985 to 1998. The following DO concentration classes were derived from the data: (1) 0 milligrams/liter (MgL); (2) >0-2 MgL; (3) >2-4 MgL; (4) >4-7 MgL; (5) >7-10 MgL; and (6) > 10 MgL. The data were gridded and contoured using the inverse distance weighting (IDW) technique. The files are available in the ESRI grid file format and images were formatted as jpeg and encapsulated post script (eps) and include the coastline and legends. An ArcView project file (*.apr) is available to load and display the data. This task was funded by the National Marine Fisheries Service, Southeast Fisheries Science Center, Mississippi Laboratories and was completed by a contractor.

1.3. Is this a one-time data collection, or an ongoing series of measurements?
One-time data collection

1.4. Actual or planned temporal coverage of the data:
1982 to 1998

1.5. Actual or planned geographic coverage of the data:
W: -97.57, E: -86.41, N: 30.86, S: 25.38

1.6. Type(s) of data:
(e.g., digital numeric data, imagery, photographs, video, audio, database, tabular data, etc.)
Image (digital)

1.7. Data collection method(s):
(e.g., satellite, airplane, unmanned aerial system, radar, weather station, moored buoy, research vessel, autonomous underwater vehicle, animal tagging, manual surveys, enforcement activities, numerical model, etc.)

1.8. If data are from a NOAA Observing System of Record, indicate name of system:

1.8.1. If data are from another observing system, please specify:

2. Point of Contact for this Data Management Plan (author or maintainer)

2.1. Name:
Nelson May

2.2. Title:
Metadata Contact

2.3. Affiliation or facility:

2.4. E-mail address:
nelson.may@noaa.gov

2.5. Phone number:
228-688-1213 ext 121

3. Responsible Party for Data Management
Program Managers, or their designee, shall be responsible for assuring the proper management of the data produced by their Program. Please indicate the responsible party below.

3.1. Name:
Nelson May

3.2. Title:
Data Steward

4. Resources
Programs must identify resources within their own budget for managing the data they produce.

4.1. Have resources for management of these data been identified?
Yes

4.2. Approximate percentage of the budget for these data devoted to data management (specify percentage or "unknown"):
0

5. Data Lineage and Quality
NOAA has issued Information Quality Guidelines for ensuring and maximizing the quality,
objectivity, utility, and integrity of information which it disseminates.

5.1. Processing workflow of the data from collection or acquisition to making it publicly accessible
(describe or provide URL of description):
  Lineage Statement:
The SEAMAP bottom dissolved oxygen measurements were reformatted and imported as point data into ArcView v3.2 GIS software. The ArcView Spatial Analyst module was used to grid and contour the data using the IDW technique. Avenue scripts were used to convert the grid files to jpeg and eps images.

5.1.1. If data at different stages of the workflow, or products derived from these data, are subject to a separate data management plan, provide reference to other plan:

5.2. Quality control procedures employed (describe or provide URL of description):
  Unknown

6. Data Documentation
The EDMC Data Documentation Procedural Directive requires that NOAA data be well documented, specifies the use of ISO 19115 and related standards for documentation of new data, and provides links to resources and tools for metadata creation and validation.

6.1. Does metadata comply with EDMC Data Documentation directive?
  No

6.1.1. If metadata are non-existent or non-compliant, please explain:
  Missing/invalid information:
    - 1.7. Data collection method(s)

6.2. Name of organization or facility providing metadata hosting:
  NMFS Office of Science and Technology

6.2.1. If service is needed for metadata hosting, please indicate:

6.3. URL of metadata folder or data catalog, if known:
  https://www.fisheries.noaa.gov/inport/item/30165

6.4. Process for producing and maintaining metadata
(describe or provide URL of description):
  Metadata produced and maintained in accordance with the NOAA Data Documentation Procedural Directive: https://nosc.noaa.gov/EDMC/DAARWG/docs/EDMC_PD-Data_Documentation_v1.pdf

7. Data Access
NAO 212-15 states that access to environmental data may only be restricted when distribution is
explicitly limited by law, regulation, policy (such as those applicable to personally identifiable information or protected critical infrastructure information or proprietary trade information) or by security requirements. The EDMC Data Access Procedural Directive contains specific guidance, recommends the use of open-standard, interoperable, non-proprietary web services, provides information about resources and tools to enable data access, and includes a Waiver to be submitted to justify any approach other than full, unrestricted public access.

7.1. Do these data comply with the Data Access directive?
Yes

7.1.1. If the data are not to be made available to the public at all, or with limitations, has a Waiver (Appendix A of Data Access directive) been filed?

7.1.2. If there are limitations to public data access, describe how data are protected from unauthorized access or disclosure:

7.2. Name of organization of facility providing data access:
Southeast Fisheries Science Center (SEFSC)

7.2.1. If data hosting service is needed, please indicate:
Yes

7.2.2. URL of data access service, if known:

7.3. Data access methods or services offered:
Contact the individual identified as the distributor for this data set. Please include the title of the data set and the name of the data steward when requesting a copy of this data.

7.4. Approximate delay between data collection and dissemination:
30

7.4.1. If delay is longer than latency of automated processing, indicate under what authority data access is delayed:

8. Data Preservation and Protection
The NOAA Procedure for Scientific Records Appraisal and Archive Approval describes how to identify, appraise and decide what scientific records are to be preserved in a NOAA archive.

8.1. Actual or planned long-term data archive location:
(Specify NCEI-MD, NCEI-CO, NCEI-NC, NCEI-MS, World Data Center (WDC) facility, Other, To Be Determined, Unable to Archive, or No Archiving Intended)

NCEI_MS

8.1.1. If World Data Center or Other, specify:
8.1.2. If To Be Determined, Unable to Archive or No Archiving Intended, explain:

8.2. Data storage facility prior to being sent to an archive facility (if any):
Mississippi Laboratory - Pascagoula, MS

8.3. Approximate delay between data collection and submission to an archive facility:
365

8.4. How will the data be protected from accidental or malicious modification or deletion prior to receipt by the archive?
Discuss data back-up, disaster recovery/contingency planning, and off-site data storage relevant to the data collection
Data resides on Networked Attached Storage (NAS) environment. Security patches/updates are immediately applied to the host environment. Data is striped/mirrored using RAID 50 technology to protect data from disk failure. Nightly backups are preformed and files are written to magnetic tape and stored in an onsite / offsite location.

9. Additional Line Office or Staff Office Questions
Line and Staff Offices may extend this template by inserting additional questions in this section.
