Please provide the following information, and submit to the NOAA DM Plan Repository.

Reference to Master DM Plan (if applicable)

As stated in Section IV, Requirement 1.3, DM Plans may be hierarchical. If this DM Plan inherits provisions from a higher-level DM Plan already submitted to the Repository, then this more-specific Plan only needs to provide information that differs from what was provided in the Master DM Plan.

URL of higher-level DM Plan (if any) as submitted to DM Plan Repository:

1. General Description of Data to be Managed

1.1. Name of the Data, data collection Project, or data-producing Program:
Louisiana and Lower Mississippi River 2014 ESIL (Environmental Sensitivity Index - Lines)

1.2. Summary description of the data:
The ESIL data set contains vector lines representing the shoreline and coastal habitats of Louisiana and the Lower Mississippi River classified according to the Environmental Sensitivity Index (ESI) classification system. This data set comprises a portion of the ESI data for Louisiana and the Lower Mississippi River. ESI data characterize the marine and coastal environments and wildlife by their sensitivity to spilled oil. The ESI data include information for three main components: shoreline habitats, sensitive biological resources, and human-use resources. See also the ESIP (ESI Shoreline Polygons) and HYDROP (Hydrography Polygons) data layers, part of the larger Louisiana and Lower Mississippi River ESI database, for additional ESI information.

1.3. Is this a one-time data collection, or an ongoing series of measurements?
One-time data collection

1.4. Actual or planned temporal coverage of the data:
2012 to 2014

1.5. Actual or planned geographic coverage of the data:
This geographic extent includes the entire coastal Louisiana and Lower Mississippi River ESI study area. The spatial extent of individual layers or feature classes may vary.

1.6. Type(s) of data:
(e.g., digital numeric data, imagery, photographs, video, audio, database, tabular data, etc.)
Map (digital)

1.7. Data collection method(s):
(e.g., satellite, airplane, unmanned aerial system, radar, weather station, moored buoy, research vessel, autonomous underwater vehicle, animal tagging, manual surveys, enforcement activities, numerical model, etc.)
1.8. If data are from a NOAA Observing System of Record, indicate name of system:

1.8.1. If data are from another observing system, please specify:

2. Point of Contact for this Data Management Plan (author or maintainer)

   2.1. Name:  
               ESI Program Manager

   2.2. Title:  
               Metadata Contact

   2.3. Affiliation or facility:

   2.4. E-mail address:  
                       orr.esi@noaa.gov

   2.5. Phone number:

3. Responsible Party for Data Management

*Program Managers, or their designee, shall be responsible for assuring the proper management of the data produced by their Program. Please indicate the responsible party below.*

   3.1. Name:  
               ESI Program Manager

   3.2. Title:  
               Data Steward

4. Resources

*Programs must identify resources within their own budget for managing the data they produce.*

   4.1. Have resources for management of these data been identified?

   4.2. Approximate percentage of the budget for these data devoted to data management (specify percentage or "unknown"):

5. Data Lineage and Quality

*NOAA has issued Information Quality Guidelines for ensuring and maximizing the quality, objectivity, utility, and integrity of information which it disseminates.*

   5.1. Processing workflow of the data from collection or acquisition to making it publicly
Process Steps:

- 2013-12-01 00:00:00 - The coastal Louisiana shoreline was derived from the integration of the Natural Resource Damage Assessment (NRDA) Shoreline Cleanup and Assessment Technique (SCAT) shoreline (2010); the U.S. Fish and Wildlife Service (FWS) National Wetlands Inventory (NWI) dataset (1973-2010); the National Geodetic Survey (NGS) national shoreline (2008); the National Oceanic and Atmospheric Administration (NOAA) Continually Updated Shoreline Product (CUSP) (1963-2010); and manual digitization at 1:4,000 from 2010-2011 BING aerial and 2011-2013 Google Earth aerial imagery. The most recent shoreline was utilized where available. The intertidal shoreline habitats were classified based on the 2010 MC252 SCAT Video Survey of Louisiana; 2013 low-altitude oblique aerial photography from Research Planning, Inc. (RPI); 2008-2011 low-altitude oblique aerial photography from BING Pictometry; 2010-2011 BING aerial imagery; and 2011-2013 Google Earth aerial imagery. In addition, MC252 SCAT shoreline survey geo-referenced ground photos were used to verify shoreline habitats where available. Oblique aerial photography by RPI was conducted during low tide at elevations of 800-1,200 feet and slow air speed. A continuous, overlapping set of geo-referenced oblique aerial photographs were acquired for the Louisiana shoreline from Sabine Lake to Atchafalaya Bay, and along the lower Mississippi River from Port Sulphur to the Gulf of Mexico, including SouthWest Pass, South Pass, and Pass a Loutre. Shoreline features of 10 meters or greater in length were classified. In addition, wetland polygon datasets originally created by the USFWS National Wetlands Inventory were modified and updated to be used in conjunction with the ESI shoreline. Where necessary, multiple types were described for each shoreline segment. See the Lineage section for additional information on the type of source data for this data layer. The ESI, biology, and human-use data are compiled into the standard ESI digital data format. A second set of interviews with participating resource experts are conducted to review the compiled data. If necessary, edits to the ESIL data layer are made based on the recommendations of the resource experts, and final hardcopy maps and digital data are created.

- 2014-05-01 00:00:00 - The Lower Mississippi River intertidal shoreline habitats were classified based on the 2010-2011 Bing aerial imagery; and 2011-2013 Google Earth aerial imagery. Shoreline features of 10 meters or greater in length were classified. In addition, wetland polygon datasets originally created by the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) and the NOAA Coastal Change Analysis Program (C-CAP) regional land cover dataset were modified and updated to be used in conjunction with the ESI shoreline. Where necessary, multiple types were described for each shoreline segment. See the Lineage section for additional information on the type of source data for this data layer. The ESI, biology, and human-use data are compiled into the standard ESI digital data format. A second set of interviews with participating resource experts are conducted to review the compiled data. If necessary, edits to the ESIL data layer
are made based on the recommendations of the resource experts, and final hardcopy maps and digital data are created.

5.1.1. If data at different stages of the workflow, or products derived from these data, are subject to a separate data management plan, provide reference to other plan:

5.2. Quality control procedures employed (describe or provide URL of description):

6. Data Documentation

The EDMC Data Documentation Procedural Directive requires that NOAA data be well documented, specifies the use of ISO 19115 and related standards for documentation of new data, and provides links to resources and tools for metadata creation and validation.

6.1. Does metadata comply with EDMC Data Documentation directive?

No

6.1.1. If metadata are non-existent or non-compliant, please explain:

Missing/invalid information:
- 1.7. Data collection method(s)
- 4.1. Have resources for management of these data been identified?
- 4.2. Approximate percentage of the budget for these data devoted to data management
- 5.2. Quality control procedures employed
- 7.1. Do these data comply with the Data Access directive?
- 7.1.1. If data are not available or has limitations, has a Waiver been filed?
- 7.1.2. If there are limitations to data access, describe how data are protected
- 7.2. Name of organization of facility providing data access
- 7.2.1. If data hosting service is needed, please indicate
- 7.4. Approximate delay between data collection and dissemination
- 8.1. Actual or planned long-term data archive location
- 8.3. Approximate delay between data collection and submission to an archive facility
- 8.4. How will the data be protected from accidental or malicious modification or deletion prior to receipt by the archive?

6.2. Name of organization or facility providing metadata hosting:

NMFS Office of Science and Technology

6.2.1. If service is needed for metadata hosting, please indicate:

6.3. URL of metadata folder or data catalog, if known:

https://www.fisheries.noaa.gov/inport/item/53935

6.4. Process for producing and maintaining metadata
7. Data Access
NAO 212-15 states that access to environmental data may only be restricted when distribution is explicitly limited by law, regulation, policy (such as those applicable to personally identifiable information or protected critical infrastructure information or proprietary trade information) or by security requirements. The EDMC Data Access Procedural Directive contains specific guidance, recommends the use of open-standard, interoperable, non-proprietary web services, provides information about resources and tools to enable data access, and includes a Waiver to be submitted to justify any approach other than full, unrestricted public access.

7.1. Do these data comply with the Data Access directive?

7.1.1. If the data are not to be made available to the public at all, or with limitations, has a Waiver (Appendix A of Data Access directive) been filed?

7.1.2. If there are limitations to public data access, describe how data are protected from unauthorized access or disclosure:

7.2. Name of organization of facility providing data access:

7.2.1. If data hosting service is needed, please indicate:

7.2.2. URL of data access service, if known:
https://response.restoration.noaa.gov/esi_download

7.3. Data access methods or services offered:
Data can be accessed by downloading the zipped ArcGIS geodatabase from the Download URL (see Distribution Information). Questions can be directed to the ESI Program Manager (Point Of Contact).

7.4. Approximate delay between data collection and dissemination:

7.4.1. If delay is longer than latency of automated processing, indicate under what authority data access is delayed:

8. Data Preservation and Protection
The NOAA Procedure for Scientific Records Appraisal and Archive Approval describes how to
identify, appraise and decide what scientific records are to be preserved in a NOAA archive.

8.1. Actual or planned long-term data archive location:
(Specify NCEI-MD, NCEI-CO, NCEI-NC, NCEI-MS, World Data Center (WDC) facility, Other, To Be Determined, Unable to Archive, or No Archiving Intended)

8.1.1. If World Data Center or Other, specify:

8.1.2. If To Be Determined, Unable to Archive or No Archiving Intended, explain:

8.2. Data storage facility prior to being sent to an archive facility (if any):
Office of Response and Restoration - Seattle, WA

8.3. Approximate delay between data collection and submission to an archive facility:

8.4. How will the data be protected from accidental or malicious modification or deletion prior to receipt by the archive?
Discuss data back-up, disaster recovery/contingency planning, and off-site data storage relevant to the data collection

9. Additional Line Office or Staff Office Questions
Line and Staff Offices may extend this template by inserting additional questions in this section.
