Longline Survey Station Schedule

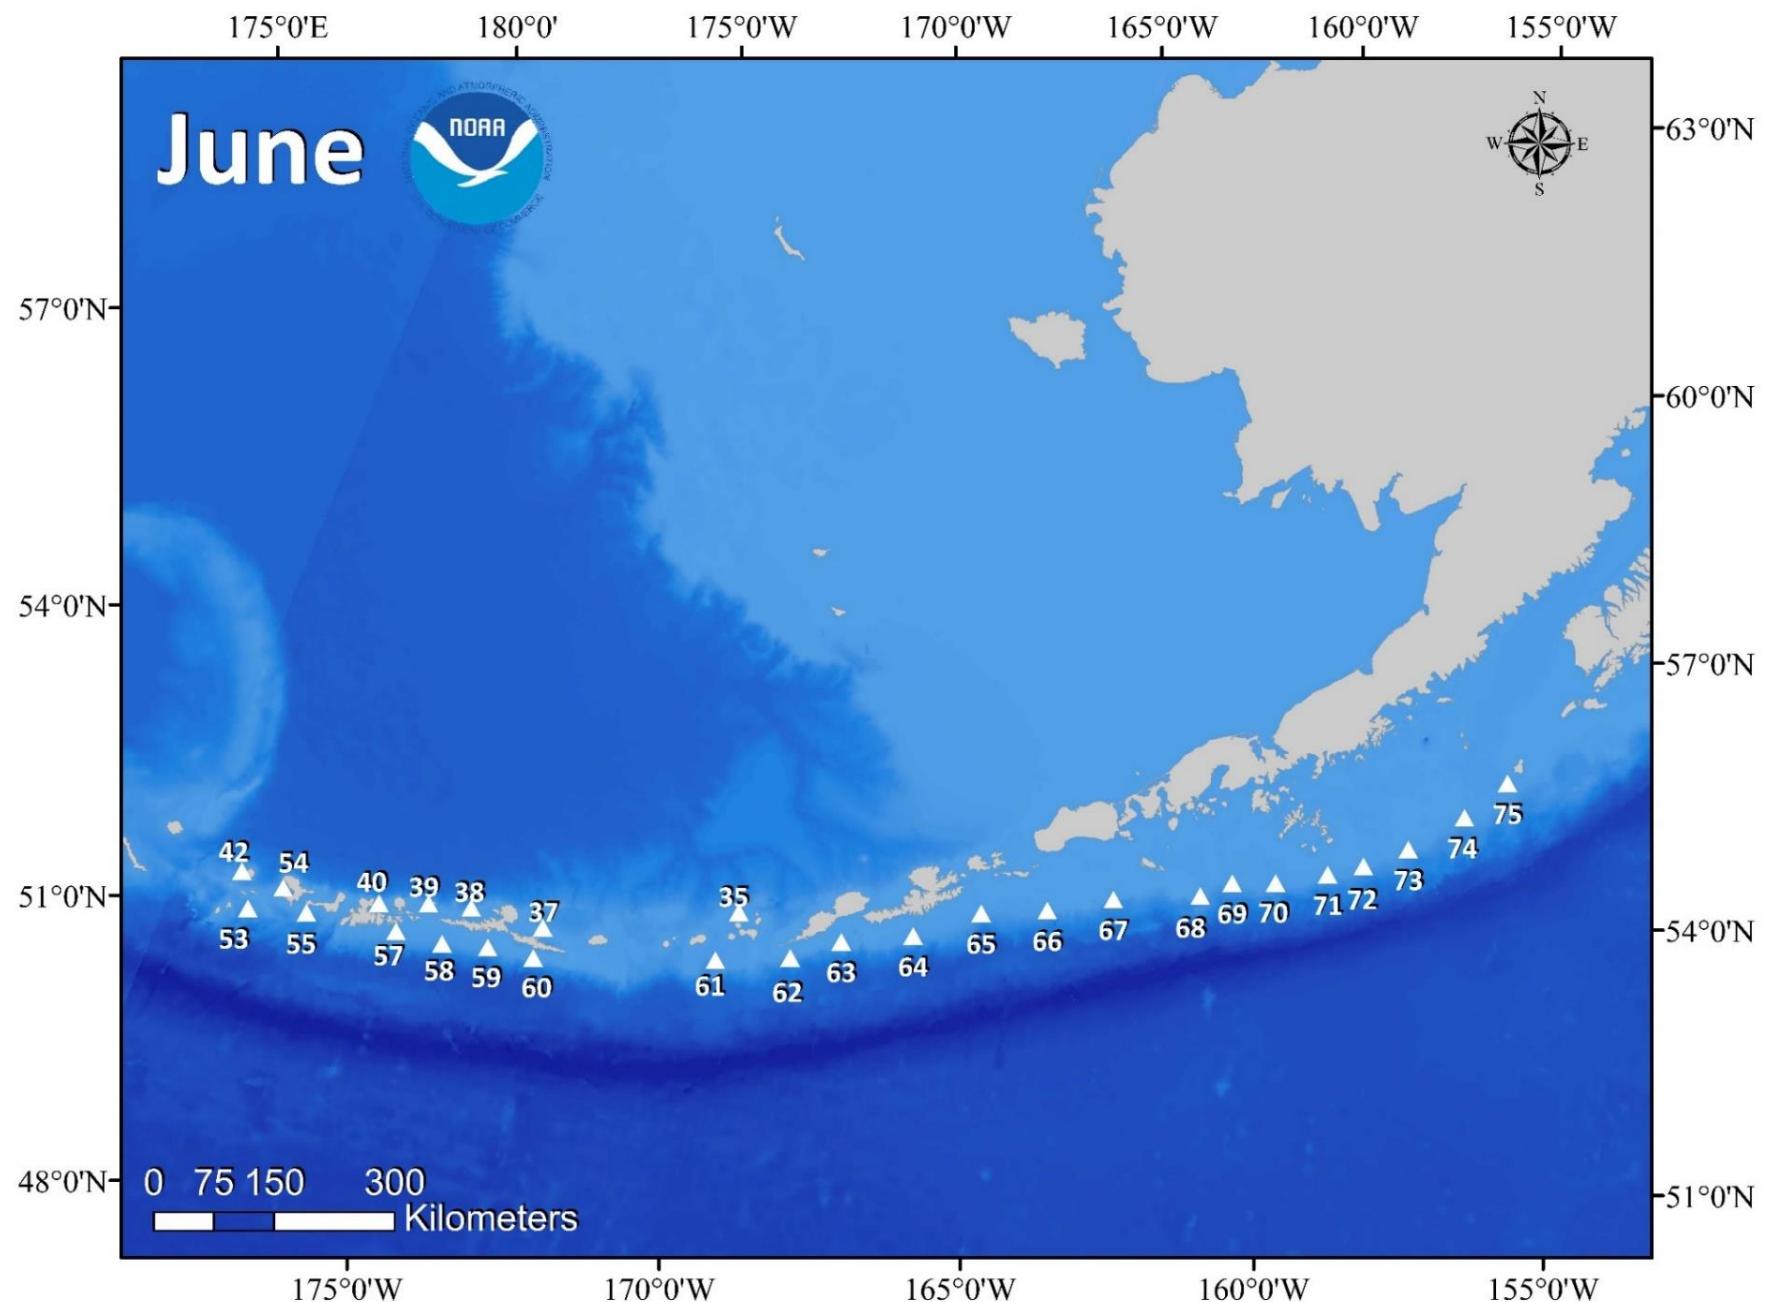

NOAA FISHERIES

Alaska Fisheries Science Center

Data collected on the AFSC Longline Survey provides an important index of abundance used in the sablefish stock assessment and is used for assessing several other groundfish stocks. To increase the accuracy of survey results, survey coordinators and stock assessment authors respectfully request that the fishing fleet avoid survey stations by staying at least 5 nautical miles from each station for 7 days before and 3 days after planned sampling dates (3 days after allows for potential survey delays). This will allow the survey vessel to sample stations unencumbered and avoid negative effects on catch rates, calculated population indices, and harvest recommendations. The planned survey schedule and station locations are listed in this calendar. The vessel for the 2024 survey is the FV Alaskan Leader. While on the grounds, the fleet is encouraged to contact the captain of the Alaskan Leader (call sign WCD 9853) on VHF channel 16 to coordinate fishing operations and minimize gear interactions. The NOAA survey coordinator, Pat Malecha, can also be contacted at: pat.malecha@noaa.gov.
