Re: Request for Renewal for the Incidental Harassment Authorization (IHA)  
Issued to Vineyard Wind, LLC

Dear Ms. Harrison,

Vineyard Northeast, LLC (Vineyard Northeast) received an Incidental Harassment Authorization (IHA) on July 27, 2022 from NOAA's National Marine Fisheries Service (NMFS), Office of Protected Resources, permitting the incidental harassment of small numbers of marine mammals resulting from high resolution geophysical (HRG) surveys in support of offshore wind development projects in Federal and State waters. The IHA permitted HRG survey efforts are within Bureau of Ocean Energy Management (BOEM) Lease area OCS-A 0522, Lease Area OCS-A 0544, and potential offshore export cable corridor (OECC) routes. As described below, Vineyard Northeast requests a renewal of the IHA to continue the specified work in the OCS-A 0522 and OCS-A 0544 and potential OECC routes.

Due to weather and other delays, Vineyard Northeast did not complete the entire HRG survey program that was proposed in the IHA, which expires on July 27, 2023. Therefore, Vineyard Northeast is formally requesting a renewal of the IHA, authorizing work between July 27, 2023 and July 26, 2024, in accordance with Condition 8 of the IHA. Condition 8 of the IHA states NMFS may issue a one-time, one-year renewal when 1) up to another year of identical or nearly identical activities are planned, or 2) the specified activities would not be completed by the time the IHA expires, and a renewal would allow for the completion of the activities, provided all of the following conditions are met:

*(a) A request for renewal is received no later than 60 days prior to the expiration of the current IHA.*

This renewal request is submitted to NMFS on March 6, 2023, 143 days prior to the IHA expiration.

(b) *The request for renewal must include the following:*

- (i) *An explanation that the activities to be conducted under the requested Renewal IHA are identical to the activities analyzed in the original IHA, are a subset of the activities, or include changes so minor that the changes do not affect the previous analyses, mitigation, monitoring requirements, or take estimates (with the exception of reducing the type or amount of take).*

HRG activities to be conducted under this renewal are identical (same equipment) to the activities analyzed in the 2022 IHA. The amount of work proposed under this renewal is a subset of the analyzed activities that were not completed during the 2022 survey season as authorized in the June 27, 2022 IHA. Thus, the IHA was based on the 69,520 kilometers (km) of survey activity and 869 vessel days. Currently, Vineyard Northeast has conducted 212 vessel days of HRG survey activities (16,960 km) of survey under the approved IHA and therefore, 657 vessel days (52,560 km) remain for purposes of the renewal.

- (ii) *A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.*

A preliminary monitoring report from the 2022 survey campaign is enclosed, which shows 2022 survey activities were completed on January 31, 2023. As presented in this report, and summarized in Table 1 below, while there were sightings of protected species within the exclusion zone during HRG operations, mitigation measures were successfully employed and there were no reported marine mammal behavioral reactions associated with our activities.

<b>Table 1. Number of Sightings Occurring within the Level B Harassment Zone<sup>1</sup></b>					
<b>Species of Interest (Common Name)</b>	<b>Number of Sightings</b>	<b>Estimated Number of Individuals</b>	<b>Behavioral Reaction Observed</b>	<b>Estimated Number of Individuals with Behavioral Reaction</b>	<b>Number of Estimated Takes</b>
Atlantic spotted dolphin	1	25	None	None	None
Common bottlenose dolphin <sup>2</sup>	28	189	None	None	None
Common dolphin (short-beaked)	434	4351	None	None	None
Fin whale	3	6	None	None	None
Gray seal	2	2	None	None	None
Harbor seal	1	1	None	None	None
Humpback whale	1	1	None	None	None
Minke whale	0	0	None	None	None
North Atlantic right whale	0	0	None	None	None
Unidentified whale	1	1	None	None	None
Unidentified dolphin	2	6	None	None	None
Unidentified seal	0	0	None	None	None
<b>Total</b>	<b>473</b>	<b>4582</b>	<b>None</b>	<b>None</b>	<b>None</b>

We examined NOAA Fisheries Stock Assessment Reports, but they have not been updated since the original IHA application was submitted in 2022 (last revised May). Based on PSO observations, the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized by the existing IHA; thereby, supporting the renewal of the IHA (see Table 2 below).

<sup>1</sup> Level B Harassment Zone distance is 141 meters for GeoMarine Geo Sparker.

<sup>2</sup> In the IHA, common bottlenose dolphin takes are split into western north Atlantic offshore stock and western north Atlantic migratory stock, which are difficult to be distinguished in the field, so are referenced collectively in this report.

<b>Table 2. Total Authorized Level B Harassment Takes and the Renewal Requested Level B Harassment Takes</b>

## 1. Introduction

On July 27, 2022, Vineyard Offshore, LLC (Vineyard Offshore) received an Incidental Harassment Authorization (IHA) issued from the National Oceanic and Atmospheric Administration (NOAA), National Marine Fisheries Service (NMFS). Office of Protected Resources, pursuant to Section 101(a)(5) of the Marine Mammal Protection Act (MMPA) and 50 Code of Federal Regulations § 216 Subpart I. This IHA permits the incidental harassment of small numbers of marine mammals resulting from high resolution geophysical (HRG) surveys in support of offshore wind development projects in Federal and State waters. The IHA is based on 869 vessel days and 69,520 kilometers of survey. The IHA authorizes the incidental (harassment level) take of 19,934 individuals from 19 different species.<sup>1</sup>

Since July 2022, geophysical surveys have been conducted within BOEM Lease Areas OCS-A 0522 and OCS-A 0544 (the “Lease Areas”), and associated cable corridors in State waters of Massachusetts, Connecticut, New York, and New Jersey. The survey season ended in January 2023. Due to weather and other delays, Vineyard Offshore did not complete the entire HRG survey program that was planned to be completed under the existing IHA. This preliminary monitoring report supports Vineyard Offshore’s request to renew the IHA for one year, as allowed by condition 8 of the IHA.

## 2. 2022 HRG Survey Activities

During this survey season, Vineyard Offshore utilized five vessels (R/V *GO Discovery*, R/V *GO Explorer*, R/V *GO Pursuit*, R/V *Brooks McCall*, and R/V *Westerly*) to conduct HRG surveys for approximately 212 vessel days covering a total of approximately 16,960 kilometers.<sup>2</sup> The program used a geophysical spread consisting of multibeam echosounder, side-scan sonar, magnetometer, transverse gradiometer, ultra-short baseline (USBL), parametric sub-bottom profiler, and deep seismic profiler (sparker – GeoMarine Geo Sparker)<sup>3</sup> to survey potential offshore export cable corridors (OECCs) and Lease Areas. All survey operations were conducted in accordance with the renewable energy Leases, approved Survey Plans, the NMFS Offshore Wind Site Assessment Programmatic Endangered Species Act (ESA) Consultation, and the conditions of the IHA issued to Vineyard Offshore in July 2022.

## 3. Results of Marine Mammal Monitoring (July 27, 2022 to January 31, 2023)

Throughout the 2022 HRG survey program, Vineyard Offshore followed the monitoring and mitigation measures described in the IHA to ensure that marine mammals were not adversely affected by equipment noise or vessels. These measures include, but are not necessarily limited to, employment of one (1) NMFS-approved Protected Species Observers (PSOs) at all times during daylight hours and two (2) NMFS-approved PSOs when HRG equipment was in use during reduced visibility (R/V *GO Discovery*, R/V *GO Explorer*, R/V *GO Pursuit*), (1) NMFS-approved PSO and (1) trained non-third-party observer at all times when HRG equipment was in use (R/V *Westerly*), exclusion zones (EZ), monitoring, ramp-up and shut

---

<sup>1</sup> In the IHA, common bottlenose dolphin takes are split into western north Atlantic offshore stock and western north Atlantic migratory stock, which are difficult to be distinguished in the field, so are referenced collectively in this report.

<sup>2</sup> In 2022, survey work commenced in March, but HRG survey activities conducted prior to July 27, 2022, were included with the previous IHA, so are not included herein.

<sup>3</sup> Only impulsive sparkers and boomers or non-impulsive non-parametric sub-bottom profilers require mitigation under the IHA and NMFS Offshore Wind Site Assessment Programmatic ESA Consultation.

down procedures, seasonal speed restrictions, and vessel strike avoidance measures. Table 1 provides a summary of observer effort from July 27, 2022, to January 31, 2023.

Table 1. Observer Effort and Number of Observations

	<b>Total</b>
Protected Species Observer Effort	6271:17
Protected Species Observations	1026

As a result of these mitigation measures, on January 31, 2023, the 2022 HRG survey program completed survey acquisition with zero Level B takes recorded. There were no incidences of vessel strikes during the 2022 HRG survey program. There were a number of sightings of delphinids from the genera of the Family Delphinidae or pinnipeds, both within the longest Level B exposure distance (141 meters), and the 100-meter exclusion zone. Shutdowns were waived for these observations following IHA Conditions 4(e)(iv)(A) and 4(e)(iv)(B). There were five sightings of baleen whales both within the longest Level B exposure distance (141 meters), and the 100-meter exclusion zone. Shutdowns of the acoustic source were carried out for these observations. During these marine mammal observations, no behaviors were documented that would be considered consistent with a behavioral response to harassment (i.e., rapid swimming away from the sound source or vessel; repeated fin slaps or breaches; notable changes in behavior as a result of vessel approach), and no behaviors suggested adverse impacts had occurred to any protected species encountered because of the survey activities undertaken. Therefore, it was concluded that the monitoring and mitigation measures employed during the HRG investigations were effective and ensured that no marine mammals were Taken. As a result, Vineyard Offshore will implement the same mitigation and monitoring methods approved for the IHA renewal period (July 2023 to July 2024).

A summary of the Authorized Takes by Level B Harassment for the current IHA and renewal request is outlined in Table 2. The number of sightings and number of individuals at each sighting that occurred within 141 meters of active HRG sound sources are provided in Table 3, as well as note observations regarding behavior.

Table 2. Total Authorized Level B Harassment Takes and the Requested Level B Harassment Takes for the Renewal Period

## 4. Summary and Conclusion

In accordance with Condition 8.b.ii of the 2022 IHA, Vineyard Offshore is providing this preliminary monitoring report in support of a request to renew the IHA for 1 year.

As presented in this report, while there were sightings of protected species within the exclusion zone during HRG operations, mitigation measures were successfully employed and there were no behavioral reactions observed. The total number of individuals sighted was less than 25% of the total number of authorized takes. Additionally, final NOAA Fisheries Stock Assessment Reports have not been published since the original IHA application was submitted, with no required modification to the effects analysis submitted under the existing IHA. Therefore, the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized by the existing IHA and support the renewal of the IHA to complete the approved survey activities.
