Overfished Declaration

—————→
Rebuilding Plan 2019-2023 / 2023-2032

Blue king crab - Pribilof Islands

There has been no directed fishing since 1999 and a number of other measures have been implemented to protect this resource, but the stock has made no progress towards rebuilding. This failure to recover is likely due to environmental conditions that are unfavorable to the blue king crab's reproduction and survival rates. The current rebuilding time does not have a projected time to rebuild.

Gray triggerfish - Gulf of Mexico

Overfishing status for 2022 is based on catch/overfishing limit (OFL). Previous years on this plot show fishing mortality rate (F) compared to F_{MSY} from the most recent stock assessment.

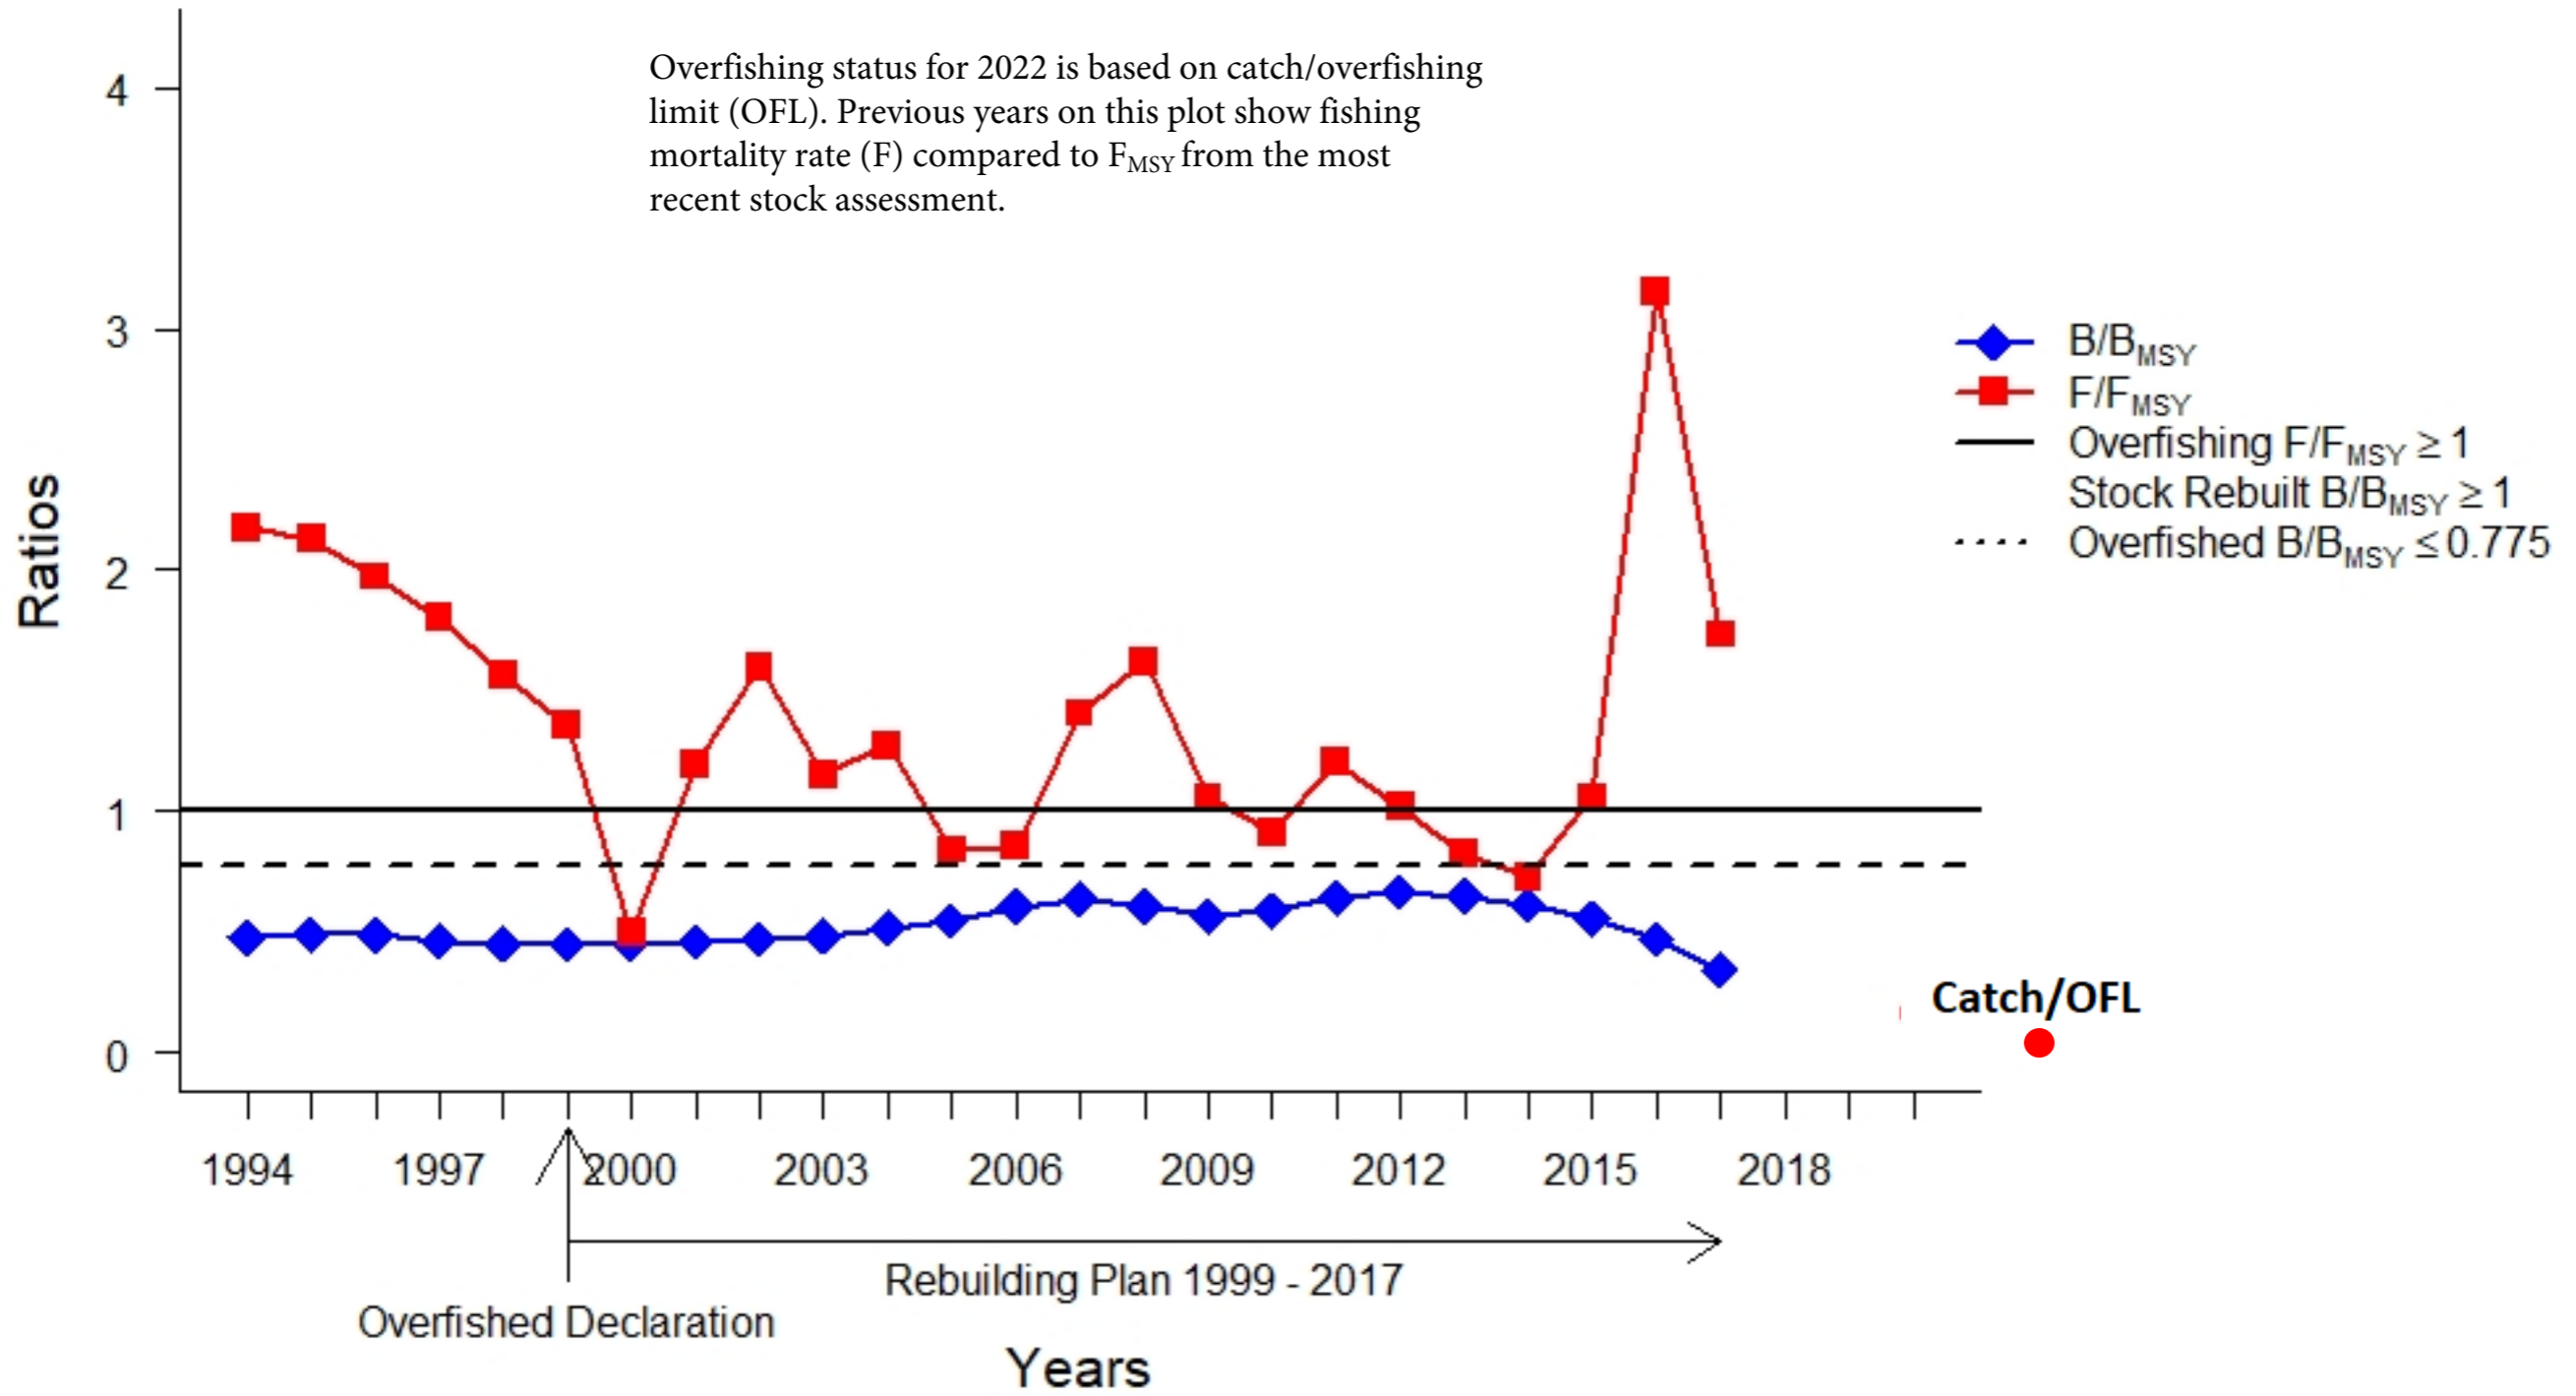

Red grouper - Southern Atlantic Coast

Overfishing status for 2022 is based on catch/overfishing limit (OFL). Previous years on this plot show fishing mortality rate (F) compared to F_{MSY} from the most recent stock assessment.

Red pogy - Southern Atlantic Coast

Overfishing status for 2022 is based on catch/overfishing limit (OFL). Previous years on this plot show fishing mortality rate (F) compared to F_{MSY} from the most recent stock assessment.
