

Appendix D. Target and target attainment scores of FSSI stocks and stock complexes. Changes in assessment information relative to the previous fish assessment quarterly report are highlighted with bold, red text.

Targets are provided in parentheses.

Science Center1	Jurisdiction2	Stock	Last ASMT	Frequency	Abundance	Catch	Comp.	Life History	Ecosystem	Score
AFSC	NPFMC	Golden king crab - Aleutian Islands*	2025	1 (1)	2 (3)	5 (5)	4 (3)	3 (4)	2 (2)	7 / 8
AFSC	NPFMC	Red king crab - Bristol Bay	2025	1 (1)	4 (5)	5 (5)	3 (3)	3 (5)	2 (3)	6 / 8

Footnotes:										
<p>1 - NOAA Fisheries Science Centers include Alaska Fisheries Science Center (AFSC), Northeast Fisheries Science Center (NEFSC), Northwest Fisheries Science Center (NWFSC), Pacific Islands Fisheries Science (PIFSC), Southeast Fisheries Science Center (SEFSC) and Southwest Fisheries Science Center (SWFSC). In some cases, assessments are conducted by multiple science centers (e.g. NW/SW and SW/PI).</p> <p>2 - Jurisdictions include Caribbean Fishery Management Council (CFMC), Gulf of Mexico Fishery Management Council (GMFMC), Atlantic Highly Migratory Species Division (HMS), Mid-Atlantic Fishery Management Council (MAFMC), New England Fishery Management Council (NEFMC), North Pacific Fishery Management Council (NPFMC), Pacific Fishery Management Council (PFMC), South Atlantic Fishery Management Council (SAFMC) and Western Pacific Fishery Management Council (WPFMC).</p> <p>3 - Performance scores* are calculated by comparing stock assessment frequency and input data levels to stock-specific targets. Stock assessment frequency describes the time between Operational Stock Assessments, as defined by the 2018 Next-Generation Stock Assessment Improvement Plan (NG-SAIP). Stock assessment input data are tracked across five categories: Abundance, Catch, Composition, Life History, and Ecosystem Considerations. Each category is ranked between 0 (no information available) and 5 (comprehensive information available). Category-specific descriptions of data levels can be found in the NG-SAIP. Target frequency and data levels are set for all stocks by their respective councils. Scores for individual stocks range between zero and eight are calculated as follows:</p> <p>Frequency score: A stock's maximum frequency score is three points, received when they are completed at or under their target frequency, which ranges from one to 10 years. Stocks exceeding their target frequency receive fewer points, with stocks exceeding their frequency by 50% receiving two points, stocks exceeding their frequency by 100% receiving one point, and stocks exceeding their frequency by 150% receiving 0.5 points. Stocks exceeding their frequencies by more than 150% receive no points.</p> <p>Data scores: Stocks can receive up to one point for each data category, for a total of five points across all categories. For each category, stocks receive one point when their data inputs meet or exceed target levels, they receive 0.5 points when their data inputs are one level below their target levels, and their receive no points when their data inputs are two or more levels below their targets.</p> <p>*Note: Stocks with stock assessments that are more than 10 years old receive no points. Stock Monitoring Updates and Rejected Stock Assessments are not considered when calculating performance scores.</p>
