Subject: Statement in Lieu of Monitoring Report for Letter of Authorization (LOA) – FloatSeis Seismic Field Trials

File Number: 29295
FloatSeis NUT Test
Expiration Date: Apr 19, 2026

Dear Jenna,

This letter is submitted by Future Energy Consultants (FEC) regarding the Letter of Authorization (LOA) issued for the "FloatSeis" seismic field trials in the Gulf of America. This LOA was valid from the date of issuance through April 19, 2026.

In accordance with your recent request and the reporting requirements set out in Section 6 of the original LOA, I am writing to formally confirm that **no geophysical survey activities or work of any kind were completed** under the authority of the aforementioned LOA prior to its expiry.

As no field trials were undertaken, there is no observational data, PSO monitoring results, or acoustic detection information to report for this period. The project was deferred to a later date due to scheduling adjustments.

We currently plan to commence the FloatSeis testing over a period of **10 days between August and December 2026,** a narrower window will be updated in due course as the technology reconfigurement is progressing.

We look forward to continuing our coordination with the National Marine Fisheries Service as we finalise the new LOA for these upcoming activities.

Kind regards,

Ben Sayers, Director
