## Upper Sacramento River Summary Conditions – November (On-going):

### Storage/Release Management Conditions:

- Reservoir Inflow Uncertainty: Meteorological projections: Shorter term forecasts (8-14 day) suggest above normal chances of precipitation
- Longer term forecasts (one-month outlook) suggest equal chance of below/above normal precipitation
- Current release from Keswick Dam: 5,000 cfs storage management
- Weather related power generation unit outages have resulted in some minor release instability downstream of Keswick Dam
- Current storm event is cold and significant amounts of inflow are not expected. More storms are forecasted with warmer conditions that may yield more inflow and runoff.

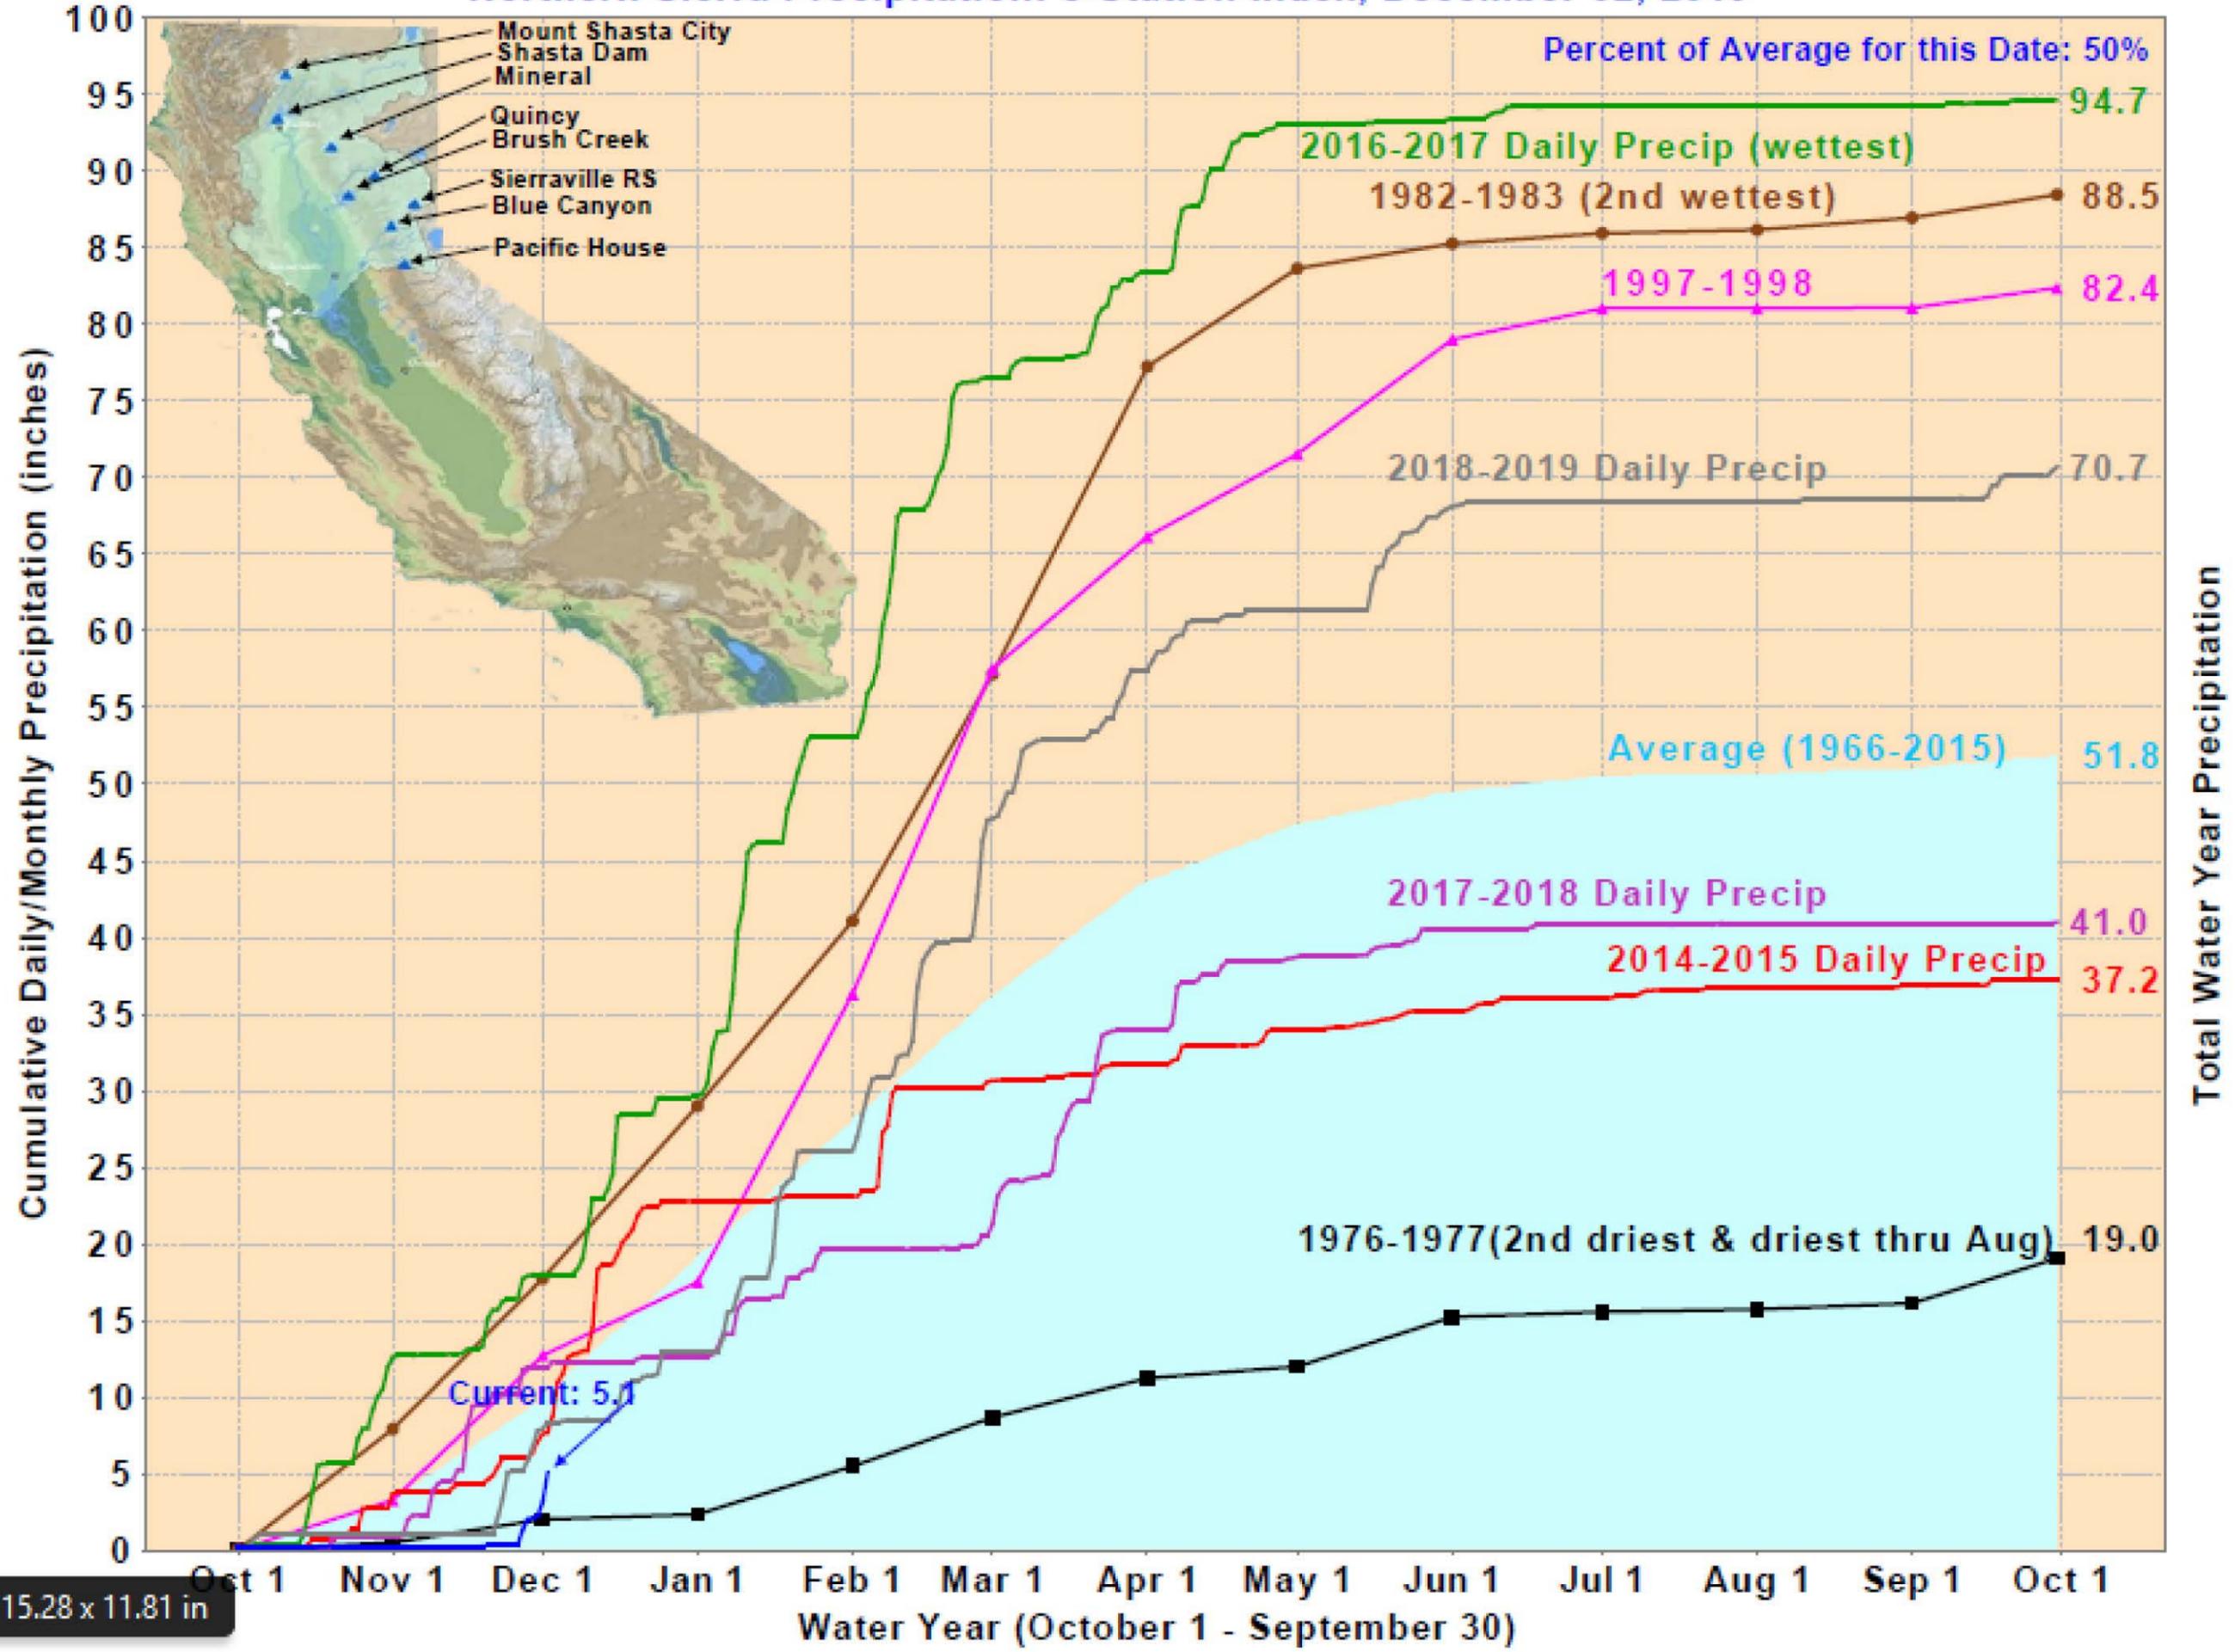

### Temperature Management:

- Temperature management: Active management
- Selective withdrawal: 5 PRG TCD gates, expect this configuration to remain until winter ambient conditions and amenable storage elevations allow for the opportunity to conserve cold water.
- Meteorological Uncertainty: Shorter term forecasts (8-14 day) suggest above normal temperatures
- Longer term forecasts (one-month outlook) suggest above normal chances of warmer temperatures

Please note:

CVP actual operations do not follow any forecasted operation or outlook; actual operations are based on real-time conditions.

CVP operational forecasts or outlooks consider general system-wide dynamics and do not necessarily address specific watershed/tributary details.

CVP releases represent monthly averages.

CVP operations are updated monthly as new hydrology information is made available December through May.

Notes

- ? = 1-9 hours of data missing (Average includes estimations)
- ! = 10 or more hours of data missing (Average not calculated)
- # = Station out of service
- ↑ = Record high air temperature
- ↓ = Record low air temperature
- = Monthly Averages

- <sup>1</sup> Temperatures are weighted averages based on individual penstock flow and temperature  
Highlighted cells in the TCD column indicate a TCD change was made on that day
- <sup>2</sup> Current control point (see page 3 for more details)
- <sup>3</sup> NFH is only reported in October, November and December
- <sup>4</sup> APR = Airport Road. This is a virtual site interpolated linearly between CCR and BSF based on distance.
